1. **OBJECTIVE:**
Rolling and Re-Rolling is the process of plastically deforming the metal by passing it between a set of rolls revolving in opposite direction. It is carried out on crude or scavenged steel/Scrap products for shaping into semi-finished or finished forms in a Re-Rolling Mill or a partially automated or a Manual Rolling Mill. Rolling is the most widely used metal forming process. It is employed to convert metal ingots to products like blooms, billets, sheets, plates, strips etc. The main objective of rolling is to decrease the thickness of the metal and give it a desired profile. Rolled products are used for different engineering, constructional & fabrication purposes.

As steel is not ductile at room temperature, heavier reductions require it to be heated to temperatures of 1500-1200°C to make it ductile by converting its crystal structure from BCC to FCC. In re-rolling mills, this operation is called reheating process and is carried out in reheating furnaces. Hot rolling operation is always preceded by reheating operation.

This entire process of Rolling is associated with various safety hazards like hit / entanglement with moving stock, burns, slip & fall, exposure to dust, noise, heat & gas etc. Most hazards in rolling process arise from coming in contact with moving hot material, falling etc. Second threat is from emissions of reheating furnaces which contain toxic gases such as carbon monoxide, Sulphur dioxide, NOx etc. Also leakage of fuel gas like producer gas, Piped Natural Gas (PNG), Coal Bed Methane (CBM) etc is a constant threat.

2. **SCOPE:**
This code of safety is applicable to Reheating Furnaces & Re-rolling mill of a Mini Steel Plant.

3. **PROCESS:**
A re-rolling mill has following main sections

   I. **Raw material Section:**
   In this section, the raw materials like ingots/billets etc are prepared for further rolling operation. Visual inspection is made to detect any defects like surface cracks, piping, bulge outs etc. Accordingly sorting, testing, cutting, grinding operations are performed in this section.
II. Reheating Furnace:

Various sub-sections of reheating furnace section and their functions are as follows:

a) **Fuel Handling Section**: The fuel handling section may include coal pre-crushers, coal pulveriser, conveyor belt, gas train, gas pipes, Pressure Relief Valve etc. The main function of this section is to prepare fuel for proper/efficient combustion in reheating furnaces.

b) **Pusher Section**: The material to be heated is put on the pusher platform for charging into furnace. As per production/discharging rate, the material is pushed into furnace at regular intervals with the help of motorized/hydraulic pusher.

c) **Reheating Furnace**: To convert chemical energy of fuels to heat energy and heat the material to required temperature efficiently and economically. Reheating furnace prepares the sock material for further hot rolling operation. The reheating operation includes Charging, Pushing, heating and discharging/conveying to rolling mill.

d) **Conveyor table**: To carry the heated discharged material to rolling mill for rolling operation.

III. Rolling mill:

To roll the hot crude steel products into desired shape by passing and squeezing it between set of revolving rolls. The rolls may be plain or grooved rolls depending on product. Rolling operation may contain one or more roll stands depending on reductions required.

The rolling mill comprises of the following sections:-

i. Drive mechanisms
ii. Roughing stands
iii. Intermediate stands
iv. Finishing mill
v. Cooling bed
vi. Shearing section/finishing yard
vii. Dispatch yard

Some of critical Equipments / facilities in Re-rolling mills are as follows:

<table>

</tr>
</tbody>
</table>
| 1. | Raw material section | Injury in grinding operation | ❖ Wear goggles for all grinding machine operations.  
❖ Operate grinding wheels at recommended speed with recommended depth of cut.  
❖ Use proper wheel guards on all grinding machines.  
❖ Use PPEs. ( Refer Safety Guideline SG-18 : Personal Protective Equipment (PPE) Management )  
❖ Develop and Follow SOPs |
| 2. | Safety in conveyors | Safety in conveyors | ❖ Avoid sitting, standing, or walking on conveyors  
❖ All conveyor to be provided with proper guards.  
❖ Never perform maintenance while a conveyor is in operation.  
❖ Ensure correct operation of conveyor controls.  
❖ Avoid loose clothing, long hair, jewellery and other loose items near conveyor  
❖ Emergency "shut-off" devices to be provided  
❖ Follow lock-out/tag-out procedures for maintenance  
❖ Only authorized/trained personnel to operate or maintain the conveyor. |
| 3. | Material stacking | Material stacking | ❖ Maintained floors in proper condition  
❖ Stacked the material properly |
B) Reheating Furnace

1) **Gas poisoning due to leakage of gas**
- All the gas line to be insulated from circuit by "U" seal and also fill up water in water seal and ensure overflow of water to drain.
- Blanking of gas line to be done before Removal of valves or flanges.
- Proper packing to be provided in fixing of valves or flanges.
- Regular inspection of gas lines to detect leakage if any.
- Use Portable “CO” monitors to detect gas leakage.
- Ensure the closure of main valve to cut off supply.
- Check all the flange/welded joints for gas leakage.
- Purge the gas pipe line with nitrogen in small segments by opening the bleeder valve.
- Develop and Follow SOP

2) **Fire hazards**
- Give clearance for cutting/welding etc after ensuring that there is no leakage of gas.
- Keep the Portable fire extinguishers ready for any hazards.
- While lighting up or off of the furnace, laid down procedures are to be followed strictly.
- Develop and Follow SOP (Refer SG-16 : Safety Guidelines for Fire Safety)

3) **Burn injury hazards, Exposed**
- Use personal protection equipments
<p>| | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
</table>
| 4) | to hot flames and hot billets/ingots | ❖ Keep the first aid kit having burn injury medicine on standby  
❖ Develop and Follow SOP |
|   | Hazards associated with re-lining of furnace with refractory bricks | ❖ Work permit system to be followed. (Refer SG-04 : Safety Guidelines for Permit to Work(Operation & Maintenance) )  
❖ Monitor the temperature of area before starting work  
❖ Hand held 24 V bulb to be used during repairs in furnace  
❖ Detail job safety protocol may be prepared to undertake the job, if job is irregular.  
❖ Develop and Follow SOP |
| 5) | Hazard due to mechanical & Electrical Maintenance | ❖ All electrical equipment/ machines to be earthed properly  
❖ Use electrical PPEs  
❖ Develop and Follow SOP (Refer SG-04 : Safety Guidelines for Permit to Work(Operation & Maintenance) ) |
| C | Rolling Mill |   |
| 1) | Moving roller table | ❖ Shutdown/permit to work with electrical isolation.  
❖ No work to be done on conveyor in running condition.  
❖ Local emergency switch to be operated for approaching conveyor.  
❖ Availability of Pull chord.  
❖ Siren system prior to restarting conveyor.  
❖ Loose cloths prohibited.  
❖ Area barricading if material is removed from height.  
❖ Develop and Follow SOP (Refer SG-09 : Safety |
<table>
<thead>
<tr>
<th></th>
<th>Guidelines in Equipment &amp; machine Guarding</th>
</tr>
</thead>
</table>
| **Rotating machineries** |  - Coupling guards to be in place.  
  - Loose cloths to prohibited  
  - Develop and Follow SOP (Refer SG-11: Safety Guidelines for Barricading) |
| **Working on mill stands** |  - "Permit to work" practice to be followed strictly  
  - Display of "Men at Work" board is to be done at Operator Control Panel  
  - Develop and Follow SOP (Refer SG-04 : Safety Guidelines for Permit to Work(Operation & Maintenance)) |
| **Roll Change** |  - During Roll Change, Rolls to be cooled with water spray before work to avoid burn injury.  
  - Ensure to take Power Shutdown for Roller Table and connected drive.  
  - Ensure written Work Clearance to be given to concerned personnel for doing the work.  
  - Cleanliness of area with respect to presence of oil, grease, jute and other inflammable materials before gas cutting/ welding job.  
  - Availability of fire hydrant to be ensured if job involves gas cutting etc.  
  - Display “Men at Work” board at Operator Control Panel.  
  - Place a plate on rollers table for smooth entry of personnel.  
  - Use required PPE when changing roll and after completion of jobs, ensure that men and materials are
<p>| 4 | Electric shock | Ensures safety precautions like “Power Shutdown”, Work Clearance before stating the job. Displaying of &quot;Men at Work&quot; at HT switching on panel. Proper earthing of brush holder arm etc. Develop and Follow SOP (Refer SG-04 : Safety Guidelines for Permit to Work(Operation &amp; Maintenance) ) |
| 5 | Gear box/ coupling | For working in gear box/coupling, take power shut-down for connected drive. Display “Men at Work” tag. Develop and Follow SOP |
| 6 | Working on EOT Cranes | For safe working, ensure “power Shutdown,” Work Clearance Men at Work tag. Watch by additional person to observe movement of nearby crane etc. Stoppers are to be welded on both sides of crane on LT rails. Submit job completion report after repair. All the lifting tools and tackles to be checked every year as per statutory requirement. Develop and Follow SOP (Refer SG-14 : Safety Guidelines for Electrical Safety) |</p>
<table>

</thead>
</table>
| 7 | Motors with belt/chain drives | ✷ Provide guards on all the motors having belt/chain type transmission mechanism.  
    ✷ Develop and Follow SOP |
| 8 | Flywheel | ✷ Flywheel to run below safe speed limits.  
    ✷ Appropriate guard to be provided around flywheel.  
    ✷ Develop and Follow SOP (Refer SG-09 : Safety Guidelines in Equipment & machine Guarding) |
| 9 | Person hit by rolling hot material during looping and play | ✷ Auto Announcement during pusher/ejector/roughing operation.  
    ✷ Proper guards to be provided to avoid material coming in the way of workmen.  
    ✷ Proper pathways to be provided for safe movement.  
    ✷ Use of appropriate PPE hand gloves, gum boots, Face shield, dust mask, goggles by persons working on stands and handling hot materials.  
    ✷ Proper leg/arms guards/safety goggles to be provided to tongs men  
    ✷ Permit to work prior to undertaking any maintenance job.  
    ✷ Develop and Follow SOP (Refer SG-11 : Safety Guidelines for Barricading, SG-18 Personal Protective Equipment (PPE) Management) |
| 10 | Cooling Fans | ✷ Appropriate guards to be provided around fan blades.  
    ✷ Proper stand to be provided.  
    ✷ Earthing to be provided.  
    ✷ Develop and Follow SOP (Refer SG-15 : Safety |

</table>
- Use appropriate safety belts.
- All portable electrical equipment, welding machines to be earthed effectively (body earthing).
- Before any heavy structural member is gas cut, it is to be supported by ropes, chains or any other means to prevent its dropping or swinging.
- Suitable fire extinguisher in working condition must be kept close to all welding and gas cutting operations.
- Rolling of gas cylinders to be avoided and transferred/shifted by proper trolleys.
- Proper protection to be provided to conveyor and electrical cables to prevent fall of sparks from welding/gas cutting.
- Isolation of electrical power and written clearance to be obtained from electrical section before start of dismantling operation.
- Area of work to be illuminated, before starting the job.
- Movement of the employees to be restricted to working area only.
- Mono rail hoist/EOT crane, to be operated within safe working load (SWL) of the equipment.
- All the openings created during dismantling to be immediately covered/barricaded.
- Compressed air vessels and pipelines to be depressurized before dismantling.
